

Littlewood–Richardson Coefficients

Pablo Santos Guerrero

November 26, 2025

Abstract

We give a self- contained, rigorous exposition of a Python program that computes the $(k+1)^{\text{st}}$ socle layer of a tensor product of induced modules. The algorithm relies on combinatorial representation theory: partitions, skew shapes, Littlewood–Richardson (LR) coefficients, and Yamanouchi (lattice) words. All mathematical notions are introduced together with the corresponding code fragments; the overall flow of the program is described in detail.
